

M23 metallopeptidase ML phylogeny — V. salarius PL25 conjugative plasmid lysin

IQ-TREE3 · Q.PFAM+G4 · 1,000 UFBoot · midpoint-rooted · 87 sequences

PL25 M23 (red star) = our query, encoded on the 74-kb conjugative plasmid contig_11. Closest characterised relatives: lysostaphin (P10547), LytM, ALE-1, CwIT (ICEBs1), EnpA, zoocin A — purple squares. 80 NCBI nr homologues across 25 halotolerant Bacillaceae genera. UFBoot ≥95 (dark green), 85–94 (olive), 70–84 (grey).
