

PL25 M23 metallopeptidase — bifunctional CwIT-like architecture (AlphaFold2)

Mature form (333 aa, signal anchor removed) • mean pLDDT = 88.7 • Slit35-like glycoside hydrolase (residues 33–185) + M23 peptidase (residues 226–323)

A — Front view

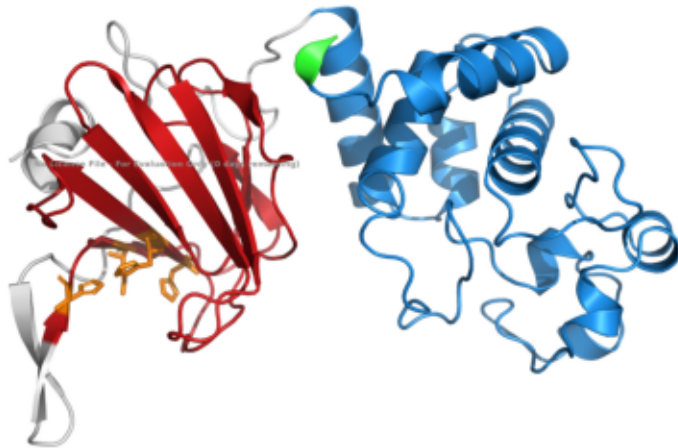

B — 90° rotation

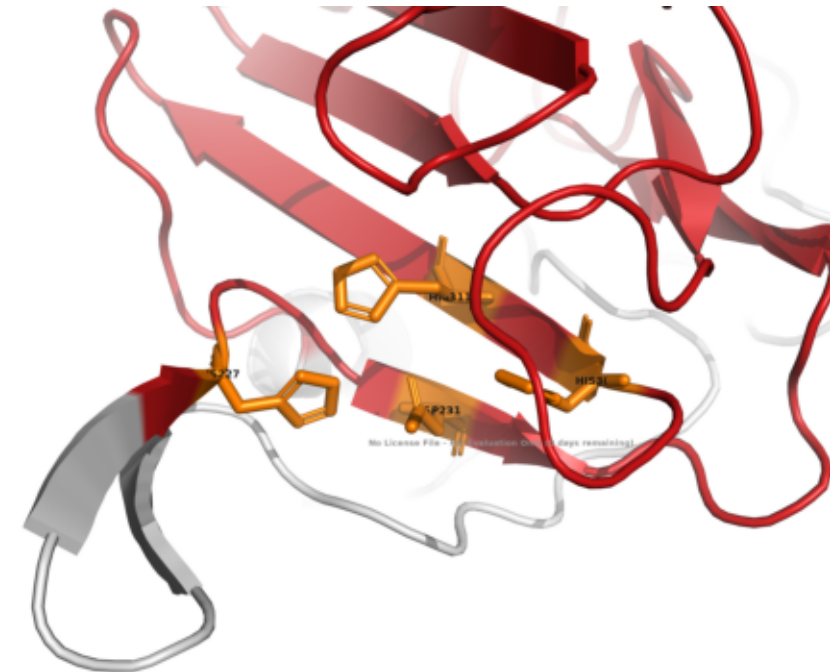

Slit35-like glycan hydrolase (blue, N-terminal) + M23 peptidase (red, C-terminal)

C — 180° back view

Linker (grey) bridges the two catalytic domains

D — M23 Zn²⁺ active site

H227, D231, H309, H311 (HxxxD + HxH motifs)
