

Synteny — *V. salarius* PL25 contig_11 vs closest halophile-Bacillaceae relatives
clinker (identity ≥ 0.30) • 4 sequences • PL25 conjugation operon shows strong synteny with *Ornithinibacillus contaminans*

Independent Prokka annotation of PL25 contig_11 vs three close halotolerant Bacillaceae contigs from NCBI nr. Each NCBI accession (full GBK record) was selected as the contig containing the M23 protein with highest sequence similarity to PL25_M23. Strong block synteny over the conjugation operon (left side) confirms shared evolutionary origin.
