

a Focused phylogeny of PL25_M23 and 14 closed-genome halotolerant Bacillaceae homologues

b Replicon context across genera (11 of 14, 79% plasmid-encoded)

(a) MAFFT v7.526 (--auto) → trimAl v1.5.rev1 (-gappyout, 332 cols) → IQ-TREE v3.1.1 (WAG+G4, 1000 UFBoot / 1000 SH-aLRT). Numbers at internal nodes are UFBoot values. (b) Closed (Complete Genome or Chromosome-level) NCBI assemblies carrying a PL25_M23 BLAST homologue, broken down by genus and replicon type.
